Chapter 9

Limitations and Future Enhancement

Limitations:

In any project there will be some limitation. According to the limitation, one can improve or overcome those limitation & can make new or higher version of any particular project.

In this project also there are some limitations which are as described below.

- The first thing is that the user wants the security for the projects. So there can be better security in this project & it can be made more easy or good by thinking about some other factors.

- The second thing is that the project can have more secure & higher data base.

. **Future Enhancement:**

Any project is having some future scope. By avoiding the limitations or mistakes done in the older version, the programmers can make new versions of any project. The new versions of any project must be compatible to its older versions, easier than the older version & more user-friendly which can provide better GUI, so that the user can work with it easily & interstingly.

This project can be made more user-friendly by adding the icons & adding picture
Or by adding other facilities.
